

Brightlearn - Case Study

Github - link

Step 1: **Miro** - planning

↳ look at each column.

Task 2: after all coding - How to transfer to github.

Copy all code on data bricks

Go to github - add a file under the created repository paste and rename the file. end name with '.sql'

or use app notepad ++

paste code from **databricks**.

File → Save as structured query language.

* Always include comments on sql

* 'Create a new column' → CASE statement

↳ categorising 0 - 5 = low

* Use as much query learned as possible.

Task 3: Need a lot of ga columns to help with analysis.

Use as many CASE statements as possible

→ Download whole table as **excel** from databricks.

→ or use google sheets.

Under 'insert' → Pivot table.

↳ Select all data - create a pivot table.

Use 'insert' → 'Graph' choose graph you want.

Rename sheets according to different work/analysis.

▽ for presentation.

↓ sales vs location

vs months

vs weekday

Go to **GitHub** → Create Repositories

- Rename
- Add description
- Make it public (easy access)
- Add read.me - add more details based on case study.
- 'Commit' to save any changes.

To add excel file

↳ Go to 'add file', upload folder with excel.

To add sql

↳ Create a new folder, name it first.

Always end with '.sql'.

Task A:

- Slide for recommendations

Submission on Github.

Miro - Project des & planning

SQL

Excel sheet

Powerpoint / Canva presentation.

↳ or **SlidesGo**

• Introduction

• Services

• Locations

• Locations per sales

• Analysis

- Total sales

₹ 89,812

• Graph for growth

• Sales by product

• Best selling products

• Analysis by date / time

- CASE STATEMENT

Peak morning

Mid morning

• Sales by weekday

• Conclusion

↳ Insights &

Recommendation.

Objective

↳ Inspect data available & tell

CEO what's happening in the coffee shop.

Q.

Coffee Analysis

- Collected data from 01 Jan to 30 June 2023 ... was 6 months
- Date Range - 6 months
- Summer ; Autumn ; Winter
- 3 store locations

Excel data analysis

- Which date / month had the most / least sales?
 - Total revenue per month.
 - Count transaction - id.
 - Group months as per seasons. (Summer, Autumn, Winter)
 - Group time → early morning
Mid morning
Afternoon
Late Afternoon
Evening
 - Get min / max date & time
 - Distinct store locations
 - Which location had high / low revenue?
 - Which location had most / least sales at certain times?
 - Which store had the most transaction - qty (Sum)
 - Most bought category vs location.
 - Cheapest vs most expensive category / type
 - Group unit-price ... Expensive
Affordable
Cheap
- Unsure of IDs - transaction ID
- Store ID
 - Product ID

Analysis

Time - Based

- Which month generated the highest & lowest revenue?
- What is the monthly revenue trend over-time?
- Which days of the month
